Some FAQ:

Q: Do children need blue light glasses?

A: The crystalline humor of children under 12 years of age are transparent and absorb more light than adults, which means that ultraviolet light, blue light and reflected light will cause more damage to them. Therefore, children need high-quality blue light lenses.

Q: Can the blue light glasses be worn outdoors?

A: Besides reducing blue light, ACBLUCE lenses can block 99.9% of ultraviolet rays, suitable for indoor and outdoor. The lens is light-colored, thus has high light transmittance, and high-definition visual effects, however the shading effect is limited. If the outdoor sunlight is particularly strong, it is more appropriate to choose sunglasses.

Some Tips:

Use a gentle lens solution. To avoid scratches.

Never wipe the lens when they're dry (there may be dust or particles).

Use Soft materials such as cleaning cloths, Don't use paper towels or other rough materials.

Please allow 1-3mm measuring deviation due to manual measurement.
